

ID Based Ticketing System

for purchasing and validating tickets

Make an investment in the future of cashless payment. Rely on a future-proof payment system that impresses with its technology, its high-quality manufacturing and individual customizing. Our ID-based ticketing system (IDBT) provides our customers a convenient and, above all, efficient way to purchase and validate public transport tickets. The IDBT provides customers with a convenient and, above all, efficient way to buy and validate public transport tickets - cashless, with or without a paper ticket (printer is optional) and with flexible pricing.

Advantages

- Tap & Go terminal: touch display, QR code scanner, RFID scanner
- ID Based Ticketing (IDBT):
 - Simplification of fare structures for passengers through simple „tapping in“
 - Ticketing & billing via ID/payment medium (credit card, debit card, chip card, smartphone, QR codes etc.)
- Completely cashless ticketing - no paper ticket necessary
- Optional integration of a printer (printing of a paper ticket possible)
- Flexible pricing
- Enables pay as you go (PAYG) with best price guarantee and price capping
- User-friendly interface, secure payment options
- Control of different eTicket systems
- Integration of existing fare systems
